## Sample preparation for analysis

Preparation
Two tablets were milled. Powder was dissolved in 20 ml of acetonitrile in 50 ml PP test tube. Filtered solution was used for analysis.

To estimate content of the active substance

1.5 ml of the filtered solution was transferred to preliminary weighed test tube and evaporated under vacuum.

Gravimetric analysis.

Sample	Macca, mg
Empty test tube ( $m_0$ )	1003.4
Test tube after evaporation ( $m_{fin}$ )	1006.7
Weight of dried residue ( $m_s$ )	3.3
Weight of active substance per 1 tablet	10,9
